

JAK-300 TREE SHEAR FOR OVER 12 TON KG EXCAVATORS (26455 LBS)

JAK-300 is the largest model of our tree shears for excavators and is suitable for efficient professional use in large excavators.

JAK-300 IS A TRUE HEAVY-DUTY TREE SHEAR

JAK-300 IS A TRUE HEAVYWEIGHT CHAMPION IN ITS CLASS, NOT AFRAID OF CHALLENGES OR HARD WORK. JAK-300 IS DESIGNED ESPECIALLY FOR HEAVY PROFESSIONAL USE, AND ITS QUALITY HAS NOT BEEN COMPROMISED.

Designed for use in large scale excavators, JAK-300 cuts the wood to be harvested neatly and precisely at the desired point. However, the efficiency of this tree shear is best noticed when faced with something more challenging than usual. Namely, JAK-300 also cuts larger trees effortlessly up to a thickness of 30 cm (11,8 in).

Due to its size, JAK-300 is ideal for felling larger trees in particular, but it is also ideal for clearing smaller crops. With the wide opening of the shear, several trees can also be cut at once, and the cutting force of the shear does not clot even with high mass. The high profile of JAK-300 ensures a firm grip on the wood during handling.

JAK-300 is also equipped with the fasteners desired by the customer. The use of the tree shear can also be diversified by equipping it with the Collector, Tilter, Felling support, Rotator and the Rapid traverse valve.
